The proposal has been drafted as per the current requirements of the Amdocs and effort could change, in case, there is any change in requirement or any impact on the solution stack considered for delivery

**Project Overview**

Ali Al Fauzan and Sons Real Estate Co., a leading real estate group in Saudi Arabia, seeks to embark on a digital transformation initiative aimed at automating internal operations, enhancing tenant and client experiences, and modernizing its online presence. This project involves the development of a custom-built Digital Automation Platform, including an integrated ERP system, tenant and internal portals, real-time auction capabilities, and advanced analytics dashboards, fully bilingual (Arabic & English) and scalable for future expansion.

The platform will centralise workflows, automate invoicing and contract, streamline communication, and ensure full regulatory compliance with Saudi regulations (PDPL, Ejar, VAT), along with international standards like GDPR where applicable. It is designed to replace manual processes, eliminate reliance on third-party vendors, and empower Al Fauzan Real Estate to deliver innovative, data-driven services to tenants and clients.

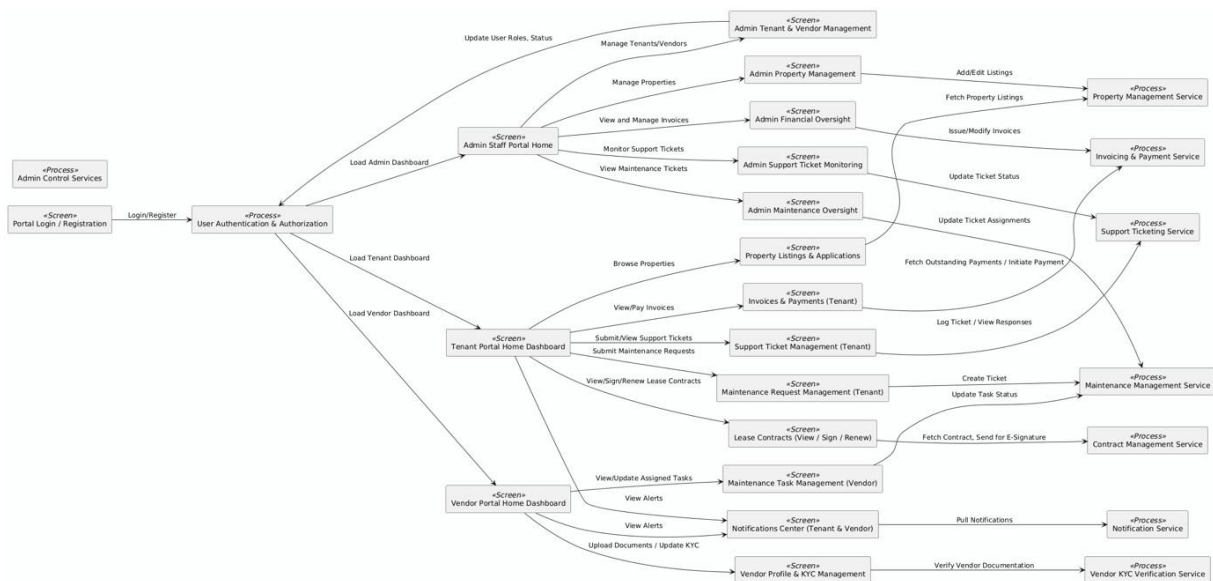

**Key Goals and Objectives**

- **Digital Transformation of Internal Processes** Automate core functions like invoicing, leasing, document verification, maintenance workflows, and internal approvals through a role-based, centralized portal.
- **Enhanced Client and Tenant Experience** Deliver a seamless, mobile-first digital experience with self-service portals, real-time property auctions, chatbot support, and online contract management.
- **Modernization of Online Presence** Redesign [www.alfauzan.com](http://www.alfauzan.com) into a dynamic, responsive, and SEO-optimised platform capable of supporting live property auctions and tenant onboarding.
- **Integration of Core Real Estate Operations into ERP** Develop a custom ERP system to manage property, leasing, finance, and maintenance workflows, aligned specifically with Al Fauzan’s business logic.
- **Full Regulatory Compliance** Ensure strict adherence to Saudi PDPL, Ejar, and VAT regulations, while also incorporating international standards like GDPR for data security and privacy.
- **Scalable and Modular Architecture** Build a platform ready for future expansion through modular design, an API-first approach, and robust micro-services support.
- **Advanced Analytics and Strategic Decision Support** Provide actionable insights via analytics dashboards, measuring occupancy, payment trends, maintenance turnaround, staff/vendor performance, and custom KPIs.
- **Mobile-first Strategy** Deliver native mobile applications (iOS & Android) to facilitate tenant/vendor interactions, real-time notifications, and on-the-go property management.

**Portal Modules and Components:**

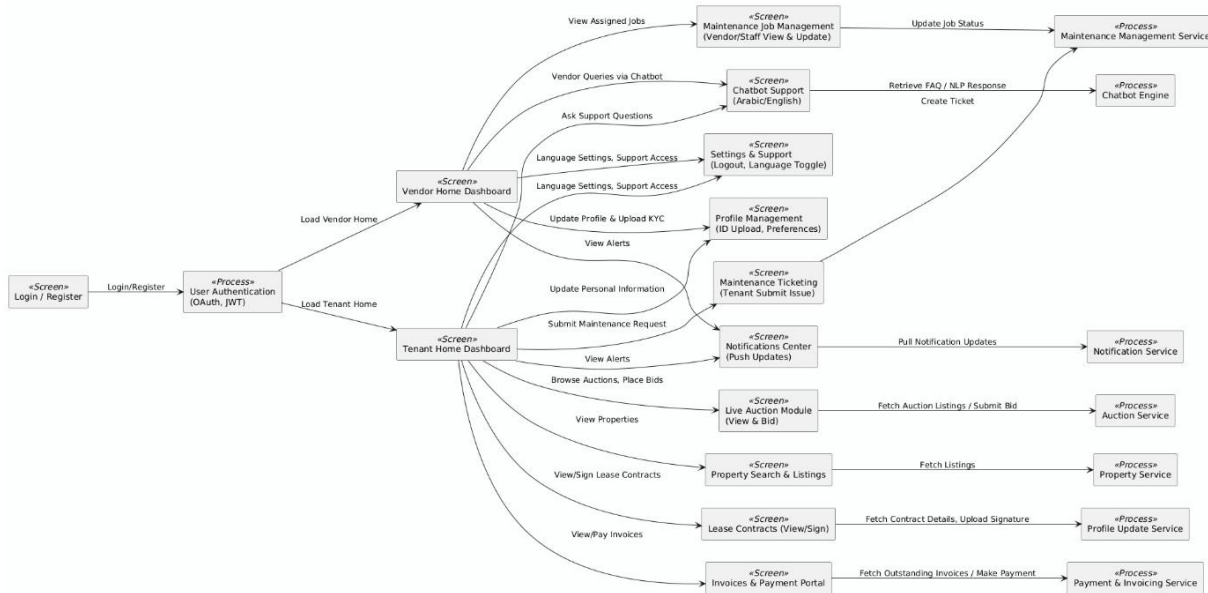

| Module        | Component                       | Description   | Key Benefits   |
|---------------|---------------------------------|---|--|
| Tenant Portal | Tenant Dashboard                | Personalised dashboard showing rental status, lease history, payments, maintenance tickets.     | Empowers tenants with self-service tools, reducing manual inquiries. |
|               | Online Application & Onboarding | Upload documents, ID verification via OCR and selfie matching for KYC during tenant onboarding. | Faster onboarding, reduced manual work, regulatory compliance.       |
|               | Contract Management             | View, sign, and track leasing contracts digitally through dynamic templates and e-signatures.   | Accelerates lease execution, improves record keeping.                |

|                            |                                  |   |   |
|----------------------------|----------------------------------|---|---|
|                            | Maintenance Request System       | Submit maintenance tickets, track status, and receive updates through the portal.             | Higher tenant satisfaction and transparent maintenance workflows. |
|                            | Support Ticket System            | Submit service requests (complaints, inquiries) with SLA tracking and escalation rules.       | Improved service quality and issue resolution tracking.           |
| Internal Operations Portal | Role-Based Access Control (RBAC) | Different views and permissions based on role (leasing, maintenance, finance, management).    | Security, data privacy, and operational clarity.                  |
|                            | Workflow Management              | Internal task assignment, SLA-based escalation for service and leasing activities.            | Streamlined processes, improved accountability.                   |
|                            | Automated ID Verification        | OCR-based extraction from documents (Iqama, National ID, CR) + facial recognition (optional). | Faster, accurate identity verification, PDPL compliance.          |
|                            | Internal Approval Workflows      | Document handling and approvals for leasing, maintenance, financial tasks.                    | Standardised approval chains, reduced bottlenecks.                |
|                            | Admin Control Panel              | Centralised management for modules (e.g., auctions, invoices, contracts, user access).        | Operational control from a single interface.                      |
| Vendor Management Portal   | Vendor Registration and KYC      | Vendors upload required documents; system verifies and tracks approval.                       | Ensures compliant, efficient vendor onboarding.                   |
|                            | Vendor Dashboard                 | Vendors manage contracts, invoices, support tickets via dedicated portal access.              | Improved vendor lifecycle management.                             |

## Mobile App Modules and Components:

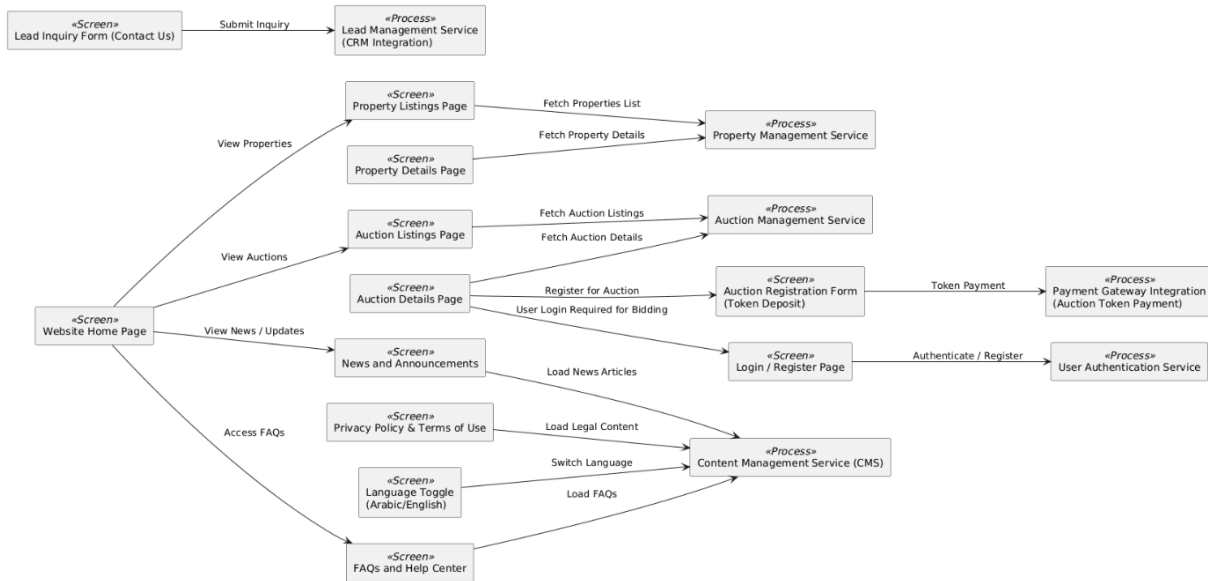

| Module            | Component                     | Description   | Key Benefits   |
|-------------------|-------------------------------|---|--|
| Tenant Mobile App | Property Discovery            | Browse available properties, view details, and initiate leasing directly from the app.                            | Increased lead conversion and faster tenant onboarding.        |
|                   | Document Upload               | Upload required documents (ID, Iqama, CR, licenses) directly via mobile.  | Seamless mobile onboarding experience.                         |
|                   | Online Payment Gateway        | Make token payments, rent payments, and service fee payments within the app.                                      | Convenient, secure mobile transactions.                        |
|                   | E-Signature for Contracts     | Sign rental contracts digitally through the app.  | Faster deal closures, paperless operations.                    |
|                   | Personal Dashboard            | View payment history, active contracts, maintenance tickets, and auction participation status.                    | Full visibility and control for tenants, anytime and anywhere. |
|                   | Push Notifications            | Alerts for invoices, auctions, contract renewals, and support ticket updates.                                     | Real-time engagement and proactive communication.              |
|                   | Maintenance Ticket Submission | Report maintenance issues with photo/video attachments through the app.   | Faster maintenance reporting and resolution.                   |
| Vendor Mobile App | Vendor Dashboard              | Vendors can view assigned tasks, update progress, manage invoices, and communication history.                     | Better vendor collaboration and transparency.                  |
| Common Features   | AI-Powered Chatbot            | Chatbot handling FAQs, payment queries, service ticket creation, property recommendations (Arabic & English NLP). | 24/7 support and enhanced user experience.                     |
|                   | Virtual Meeting Scheduler     | Schedule online meetings with leasing or maintenance teams directly through the app.                              | Personalised support and faster issue handling.                |
|                   | Multilingual Support          | Full Arabic & English support throughout the mobile app.  | Wider reach and user-friendliness for diverse audiences.       |

## Website Modules and Components:

| Module                | Component                           | Description   | Key Benefits   |
|-----------------------|-------------------------------------|---|--|
| Public Website        | Website Redesign                    | Full revamp of <a href="http://www.alfauzan.com">www.alfauzan.com</a> with a modern, mobile-first, bilingual (Arabic & English) design. | Stronger brand presence, better user engagement.           |
|                       | Dynamic Property Listings           | Real-time listing of available units, project details, and leasing information.   | Faster lead conversion and transparency for clients.       |
|                       | SEO Optimisation and Analytics      | SEO best practices implemented with tracking through Google Analytics or similar tools.   | Higher visibility on search engines, performance tracking. |
|                       | Integrated Lead Capture Forms       | Smart contact forms, inquiry capture with CRM integration.  | Improved lead generation and follow-ups.                   |
|                       | E-commerce Style Leasing Experience | Ability for new clients to browse, upload docs, pay token amounts, and initiate contracts online.                                       | Streamlined leasing journey, reduced admin load.           |
|                       | Chatbot Integration                 | Arabic/English NLP-based AI chatbot for assisting visitors with inquiries and support.  | 24/7 client assistance, reduced response time.             |
|                       | News and Updates Section            | Dynamic section for company news, project updates, and event announcements.   | Enhances customer communication and brand loyalty.         |
| Live Auction Platform | Real-Time Auction Engine            | Real-time bidding platform using WebSocket/Firebase technology with verified user participation.  | Faster property sales, fair and transparent bidding.       |
|                       | Smart Contracts for Auctions        | Blockchain-ready smart contract integration for   | Enhanced auction trust and security.                       |

|                 |                                    |  |   |
|-----------------|------------------------------------|--|---|
|                 |                                    | automated winner selection and contract finalization.                                      |   |
|                 | Admin Tools for Auction Management | Tools for auction creation, winner selection, payment initiation, and contract generation. | Simplifies auction operations for the company.              |
| Support Section | FAQs and Support Portal            | Self-help FAQs, support articles, and ticket submission for visitors.                      | Reduces direct support load and enhances user satisfaction. |

## Admin Panel Modules and Components:

| Module                     | Component                              | Description   | Key Benefits   |
|----------------------------|--|---|--|
| User & Role Management     | Role-Based Access Control (RBAC)       | Define and manage roles (Admin, Manager, Accountant, Support Agent, Vendor Manager, etc.).          | Secure, structured access; ensures data privacy and operational clarity. |
|                            | User Onboarding and Management         | Create, edit, deactivate, or delete users with audit logs.  | Full control over system access and user lifecycle.                      |
| Property Management        | Property Listings Management           | Add, edit, publish, or remove properties across residential, commercial, and mixed-use categories.  | Real-time control over available inventory.                              |
|                            | Auction Creation and Management        | Create new auctions, set reserve prices, monitor live bidding, declare winners, and finalise deals. | Streamlines real-time property sales through auctions.                   |
| Tenant & Vendor Management | Tenant Onboarding & Profile Management | View and manage tenant profiles, documents, leasing contracts, and support history.                 | Centralised tenant control, fast resolution management.                  |
|                            | Vendor Registration and Compliance     | Approve/reject vendor applications, monitor compliance documents, and manage contracts.             | Maintain vendor quality and operational compliance.                      |

|                             |   |  |  |
|-----------------------------|---|--|--|
| Contract & Document Control | Dynamic Contract Template Management      | Create, update, and manage dynamic templates for leases, auction contracts, maintenance SLAs, etc.         | Rapid contract generation, legal consistency.                      |
|                             | Document Verification Logs                | Review verification steps for ID, licenses, and business documents, with audit trails for PDPL compliance. | Ensures full regulatory compliance and reduces risks.              |
| Finance Management          | Invoicing and Payment Monitoring          | Generate rent/service invoices, track payment status, issue reminders, and handle disputes.                | Improved financial operations and cash flow transparency.          |
|                             | Refund and Adjustment Management          | Approve/refuse refunds, handle adjustments against services or property payments.                          | Financial flexibility and better client satisfaction.              |
| Support and Maintenance     | Ticket Monitoring and SLA Tracking        | View, assign, escalate, and close support or maintenance tickets with defined SLA timelines.               | Faster issue resolution and higher tenant satisfaction.            |
| Analytics & Reporting       | KPI Dashboard and Custom Reports          | Real-time insights on occupancy, payments, complaints turnaround, auction statistics, etc.                 | Data-driven strategic decision-making.                             |
| Notifications Management    | WhatsApp/SMS/Email Templates              | Manage and customise notification templates for invoices, contracts, maintenance alerts, etc.              | Personalised and proactive communication with clients and vendors. |
| System Settings             | Language, Branding, and Policy Management | Update platform language settings, upload logos, configure privacy policies and terms.                     | Flexibility in maintaining brand and regulatory updates.           |
| Security & Audit            | Access Logs and Activity Monitoring       | Monitor who accessed what, when, and what changes were made, with detailed audit trails.                   | Enhances platform security and ensures regulatory traceability.    |

## User Personas Overview:

| Persona               | Platform (Mobile / Portal / Website) | Primary Role                  | Key Actions   | Needs / Expectations   |
|-----------------------|--------------------------------------|-------------------------------|---|--|
| New Client / Prospect | Website, Mobile App                  | Property Explorer, Bidder     | Browse properties, join auctions, submit documents, make token payments.            | Fast, smooth browsing; easy application process; trusted transactions. |
| Existing Tenant       | Mobile App, Portal                   | Lease Manager, Support Seeker | Manage rental payments, view contracts, request maintenance, track support tickets. | Transparency, quick support, easy contract renewals.                   |

|                             |                               |                                      |   |   |
|-----------------------------|-------------------------------|--------------------------------------|---|---|
| Internal Leasing Agent      | Portal, Admin Panel           | Tenant Onboarder, Deal Closer        | Approve applications, verify documents, create contracts, manage leasing tasks. | Fast tenant onboarding, minimal manual tasks, SLA-based workflows.          |
| Internal Maintenance Staff  | Portal, Mobile App (optional) | Maintenance Handler                  | Receive, manage, and close maintenance requests; update statuses.               | Clear task assignment, easy mobile updates, SLA tracking.                   |
| Property Manager            | Portal, Admin Panel           | Portfolio Overseer                   | Monitor occupancy, revenue, contract renewals, tenant/vendor issues.            | Real-time data, quick escalation management, operational control.           |
| Vendor (Service Provider)   | Portal, Mobile App            | Contractor / Service Provider        | Submit invoices, update task progress, manage maintenance requests.             | Transparent task assignment, payment tracking, mobile-friendly access.      |
| Auction Participant         | Website, Mobile App           | Property Bidder                      | Register, verify identity, participate in live auctions, complete contracts.    | Secure auction process, fair winner announcement, easy payment and signing. |
| Finance / Accountant        | Portal, Admin Panel           | Payment and Invoice Manager          | Generate invoices, track payments, manage refunds, view financial reports.      | Error-free billing, real-time financial insights, audit-ready records.      |
| IT Admin / System Admin     | Admin Panel                   | System Manager                       | Manage users, roles, security settings, backups, logs, and updates.             | Full platform control, high security, easy system maintenance.              |
| Customer Support Agent      | Portal, Admin Panel           | Ticket Resolver, Client Communicator | Manage support tickets, reply to tenant/vendor inquiries, escalate issues.      | Fast ticket handling, SLA monitoring, easy escalation workflows.            |
| Top Management / Executives | Portal, Admin Panel           | Strategic Decision Maker             | Access dashboards, occupancy KPIs, financial performance reports.               | Strategic oversight, real-time operational metrics, business analytics.     |

## Content Management Features in the Admin Panel:

| Feature                                | Description   | User Benefit  |
|--|---|---|
| Property Listing Management            | Create, edit, update, and remove properties with rich content (images, videos, descriptions, price, availability status). | Real-time control over property inventory; keeps listings up-to-date and appealing. |
| Auction Management                     | Launch, manage, and close real estate auctions, set reserve prices, monitor bids in real time.                            | Quick setup and control of property auctions, faster sales cycles.                  |
| News and Updates Publishing            | Publish and manage company news, project announcements, event updates on the website.                                     | Keeps clients informed and engaged, improves brand visibility.                      |
| SEO Metadata Management                | Add and edit meta titles, descriptions, keywords for each property, news article, and page.                               | Improves website's SEO ranking, drives more organic traffic.                        |
| Banner and Promotional Content Control | Upload, schedule, and manage homepage banners, promotional messages, and advertisements.                                  | Ability to run targeted campaigns and promotions dynamically.                       |
| Document Template Management           | Create and edit templates for contracts, invoices, KYC communications, maintenance SLAs.                                  | Standardised documents, faster document generation, legal consistency.              |
| Media Library Management               | Central repository to upload and organise images, videos, PDFs, and marketing materials.                                  | Easy retrieval and reuse of assets across listings and news updates.                |
| Form Builder & Management              | Create and edit lead capture forms, contact forms, tenant application forms without coding.                               | Customisable forms for different needs, faster adaptation to campaigns.             |
| FAQ and Help Center Management         | Add and update FAQ entries and support articles accessible from website and portal.                                       | Reduces support queries by providing self-service help options.                     |
| Notification Content Management        | Customise WhatsApp/SMS/Email templates for system alerts, invoices, maintenance updates.                                  | Personalised and localised communication with clients and vendors.                  |
| CMS User Roles and Approval Workflow   | Define who can draft, edit, and publish content with approval processes for sensitive updates.                            | Maintains content quality and ensures governance over public-facing content.        |
| Multi-Language Content Support         | Manage Arabic and English content versions side-by-side for all website and portal materials.                             | Supports bilingual audiences, wider market reach, regulatory compliance.            |

## Functional Details:

| ID     | Module  | Functionality             | Description  | Priority |
|--------|---------|---------------------------|--|----------|
| FRD-01 | Website | Dynamic Property Listings | Display real-time available units with search, filter, and detail views (bilingual: Arabic & English). | High     |
| FRD-02 | Website | Lead Capture Forms        | Smart forms for inquiries, leasing requests, and auction registrations, integrated with CRM.           | High     |
| FRD-03 | Website | Real-Time Auction Engine  | WebSocket or Firebase-based live bidding system for properties with                                    | High     |

|        |                            |                                     |  |        |
|--------|----------------------------|-------------------------------------|--|--------|
|        |                            |                                     | reserve price and auto-bid support.  |        |
| FRD-04 | Website                    | Content Management System (CMS)     | Admins can manage properties, news, banners, SEO metadata, FAQs, and media uploads.                    | High   |
| FRD-05 | Website                    | SEO Optimisation                    | Embed meta titles, descriptions, and schema for better search engine rankings.                         | Medium |
| FRD-06 | Portal - Tenant            | Tenant Dashboard                    | View active lease contracts, rental payment status, ticket status, and auction participation history.  | High   |
| FRD-07 | Portal - Tenant            | Online Maintenance Request          | Tenants can submit maintenance issues, with file upload (images/videos), status tracking.              | High   |
| FRD-08 | Portal - Tenant            | Online Payments                     | Token payments, rental and service fee payments via integrated payment gateway.                        | High   |
| FRD-09 | Portal - Tenant            | Contract Management                 | Tenants view, sign, and download digital lease agreements and renewal offers.                          | High   |
| FRD-10 | Portal - Internal          | Workflow Management                 | SLA-based task assignment, progress tracking, escalation mechanisms for leasing, finance, maintenance. | High   |
| FRD-11 | Portal - Internal          | Document Verification Automation    | OCR scanning, selfie matching, and backend verification workflows for tenant and vendor KYC.           | High   |
| FRD-12 | Portal - Vendor            | Vendor Registration & Dashboard     | Vendors register, upload documents, track tasks, submit invoices, and view contract statuses.          | High   |
| FRD-13 | Mobile App - Tenant        | Mobile Property Discovery           | Browse available properties, apply for leasing, and join auctions via iOS/Android app.                 | High   |
| FRD-14 | Mobile App - Tenant        | Mobile Payments                     | Make payments for leasing and services through the mobile app securely.                                | High   |
| FRD-15 | Mobile App - Tenant        | Maintenance Requests via App        | Submit and track maintenance requests with media attachments through mobile.                           | High   |
| FRD-16 | Mobile App - Notifications | Push Notifications                  | Invoices, auctions, contracts, and maintenance updates pushed to tenants and vendors.                  | High   |
| FRD-17 | Mobile App - Chatbot       | AI Chatbot                          | Arabic & English AI-powered chatbot for FAQs, ticketing, property recommendations.                     | High   |
| FRD-18 | Admin Panel                | User Role and Permission Management | Define/manage roles like Admin, Manager, Accountant, Vendor Manager, and Support Agent.                | High   |
| FRD-19 | Admin Panel                | Auction Management                  | Admin create/manage auctions, verify participants, monitor bidding, declare winners.                   | High   |

|        |                     |                                  |  |        |
|--------|---------------------|----------------------------------|--|--------|
| FRD-20 | Admin Panel         | Invoicing and Payment Control    | Issue, monitor, and manage invoices and payment confirmations, refunds if needed.                            | High   |
| FRD-21 | Admin Panel         | Analytics and Reporting          | Dashboards for occupancy rates, payment trends, maintenance turnaround, vendor/staff performance.            | High   |
| FRD-22 | Admin Panel         | CMS for Website                  | Manage website content: property listings, banners, articles, FAQs, SEO fields, etc.                         | High   |
| FRD-23 | Admin Panel         | Communication Management         | Configure WhatsApp, SMS, and Email templates for automated alerts and communication.                         | Medium |
| FRD-24 | Admin Panel         | Document Template Management     | Manage templates for contracts, invoices, auction certificates.  | Medium |
| FRD-25 | Admin Panel         | SLA Monitoring for Tickets       | Monitor, escalate, and report on SLA compliance for support and maintenance tickets.                         | High   |
| FRD-26 | Security            | Audit Logs                       | System-wide activity logs for tracking user actions, changes, and security events.                           | High   |
| FRD-27 | Security            | OAuth, JWT, SSL, PDPL Compliance | Ensure all user authentication, session management, and data storage meet Saudi and international standards. | High   |
| FRD-28 | Backup and Recovery | Disaster Recovery Strategy       | Automated daily backups, version control, and defined RTO/RPO strategies.                                    | High   |
| FRD-29 | Integration         | API-First Architecture           | Enable integration with third-party ERP, CRM, and finance systems.   | Medium |
| FRD-30 | ERP Core            | Property Management Module       | ERP system for managing properties, leases, finance workflows, maintenance tracking.                         | High   |

#### Technical Details:

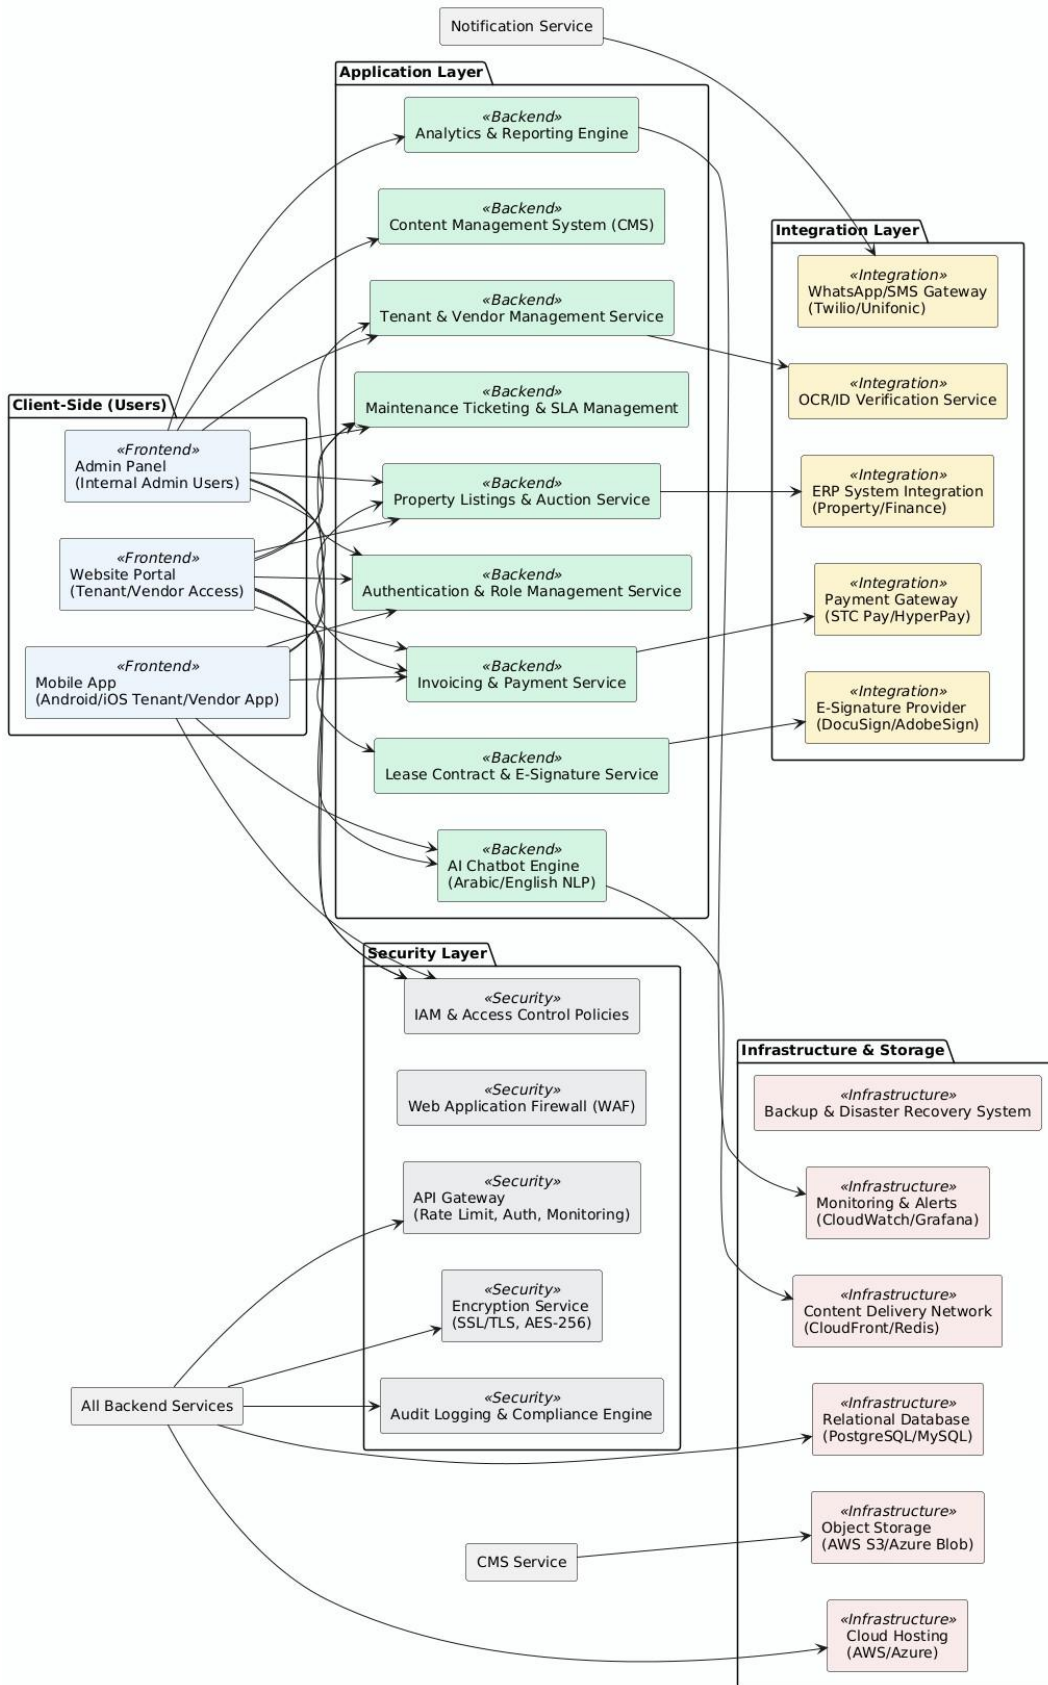

| ID     | Module/Area    | Technical Requirement                | Description  | Priority |
|--------|----------------|--------------------------------------|--|----------|
| TRD-01 | Website        | Mobile-First Responsive Design       | Website must be fully responsive and optimized for mobile, tablet, and desktop.                  | High     |
| TRD-02 | Website        | Bilingual (Arabic & English) Support | Full support for bilingual content across all web pages, listings, and forms.                    | High     |
| TRD-03 | Website        | SEO Best Practices Compliance        | Meta titles, descriptions, alt text, and structured data (schema.org) implemented.               | Medium   |
| TRD-04 | Portal & Admin | Role-Based Access Control (RBAC)     | Different access levels for Admins, Managers, Accountants, Support Agents, Vendors, and Tenants. | High     |
| TRD-05 | Portal         | OCR and AI-based ID Verification     | Integration of OCR technology for document extraction and AI facial                              | High     |

|        |                     |  |   |        |
|--------|---------------------|--|---|--------|
|        |                     |  | recognition for ID verification.  |        |
| TRD-06 | Portal              | E-Signature Integration                | Seamless integration of a legally compliant e-signature solution for contracts.   | High   |
| TRD-07 | Mobile App          | Native iOS & Android Development       | Mobile apps must be developed natively or using hybrid technologies like Flutter/React Native with best performance.            | High   |
| TRD-08 | Mobile App          | Push Notification Integration          | Integration with Firebase Cloud Messaging (FCM) or equivalent for real-time push notifications.                                 | High   |
| TRD-09 | Mobile App          | Secure In-App Payment                  | Integration with payment gateways (e.g., Hyperpay, STC Pay) following PCI DSS compliance.                                       | High   |
| TRD-10 | Mobile App & Portal | AI Chatbot Integration                 | AI/NLP chatbot supporting Arabic and English for FAQs, service tickets, and property recommendations.                           | Medium |
| TRD-11 | Admin Panel         | Content Management System (CMS)        | Enable dynamic management of properties, news, banners, SEO fields, FAQs, and promotional content.                              | High   |
| TRD-12 | Admin Panel         | Auction Management System              | Real-time auction management with admin-side control for bids, reserves, and winner declaration.                                | High   |
| TRD-13 | Database            | Scalable, Secure Database Architecture | Relational database (e.g., PostgreSQL, MS SQL Server) with encrypted storage for sensitive data.                                | High   |
| TRD-14 | Platform Wide       | API-First Architecture                 | RESTful APIs for integration with ERP, CRM, third-party platforms, and mobile applications.                                     | High   |
| TRD-15 | Platform Wide       | OAuth 2.0 / JWT Authentication         | Secure authentication and authorization protocols for all user interactions.  | High   |
| TRD-16 | Platform Wide       | GDPR and PDPL Compliance               | Data privacy compliance according to Saudi PDPL and international GDPR standards, including consent management and user rights. | High   |
| TRD-17 | Platform Wide       | SSL/TLS Encryption                     | All data transmission secured with SSL/TLS 1.2 or higher.   | High   |
| TRD-18 | Platform Wide       | Multi-Factor Authentication (MFA)      | Optional MFA for admin and sensitive user roles.  | Medium |
| TRD-19 | Platform Wide       | Load Balancing and Auto-Scaling        | Platform to handle 10,000+ concurrent users with horizontal scaling support.  | High   |
| TRD-20 | Platform Wide       | Disaster Recovery & Daily Backup       | Automated full and incremental backups with   | High   |

|        |                        |  |   |        |
|--------|------------------------|--|---|--------|
|        |                        |  | RTO (Recovery Time Objective) < 4 hours and RPO (Recovery Point Objective) < 1 hour.          |        |
| TRD-21 | Analytics              | Real-Time KPI Dashboard                  | Interactive dashboards with data visualization tools for occupancy, revenue, complaints, etc. | High   |
| TRD-22 | Communications System  | WhatsApp/SMS/Email Notification Gateways | Integration with messaging APIs for automated system notifications.                           | High   |
| TRD-23 | ERP System             | Custom ERP Integration                   | ERP modules built to handle property management, leasing, finance, and maintenance workflows. | High   |
| TRD-24 | ERP System             | Document Storage and Retrieval System    | Secure document storage with version control, tagging, and retrieval options.                 | High   |
| TRD-25 | Platform Wide          | Auto Performance Testing Pipelines       | Setup CI/CD pipelines that run automated load, stress, and performance testing.               | Medium |
| TRD-26 | Mobile App & Portal    | In-App Virtual Meeting Scheduling        | Allow tenants and vendors to schedule virtual meetings with internal teams via app or portal. | Medium |
| TRD-27 | Platform Wide          | Audit Logs and Activity Tracking         | Record all user activity for transparency, accountability, and regulatory auditing.           | High   |
| TRD-28 | Hosting Infrastructure | Cloud Hosting with SLA-Backed Uptime     | Hosting on reputable cloud providers (AWS, Azure) with SLA-backed 99.9% uptime.               | High   |
| TRD-29 | Portal & Mobile App    | SLA Tracking Engine for Support Tickets  | Automated SLA monitoring and escalation for maintenance and support requests.                 | High   |

## System Architecture:

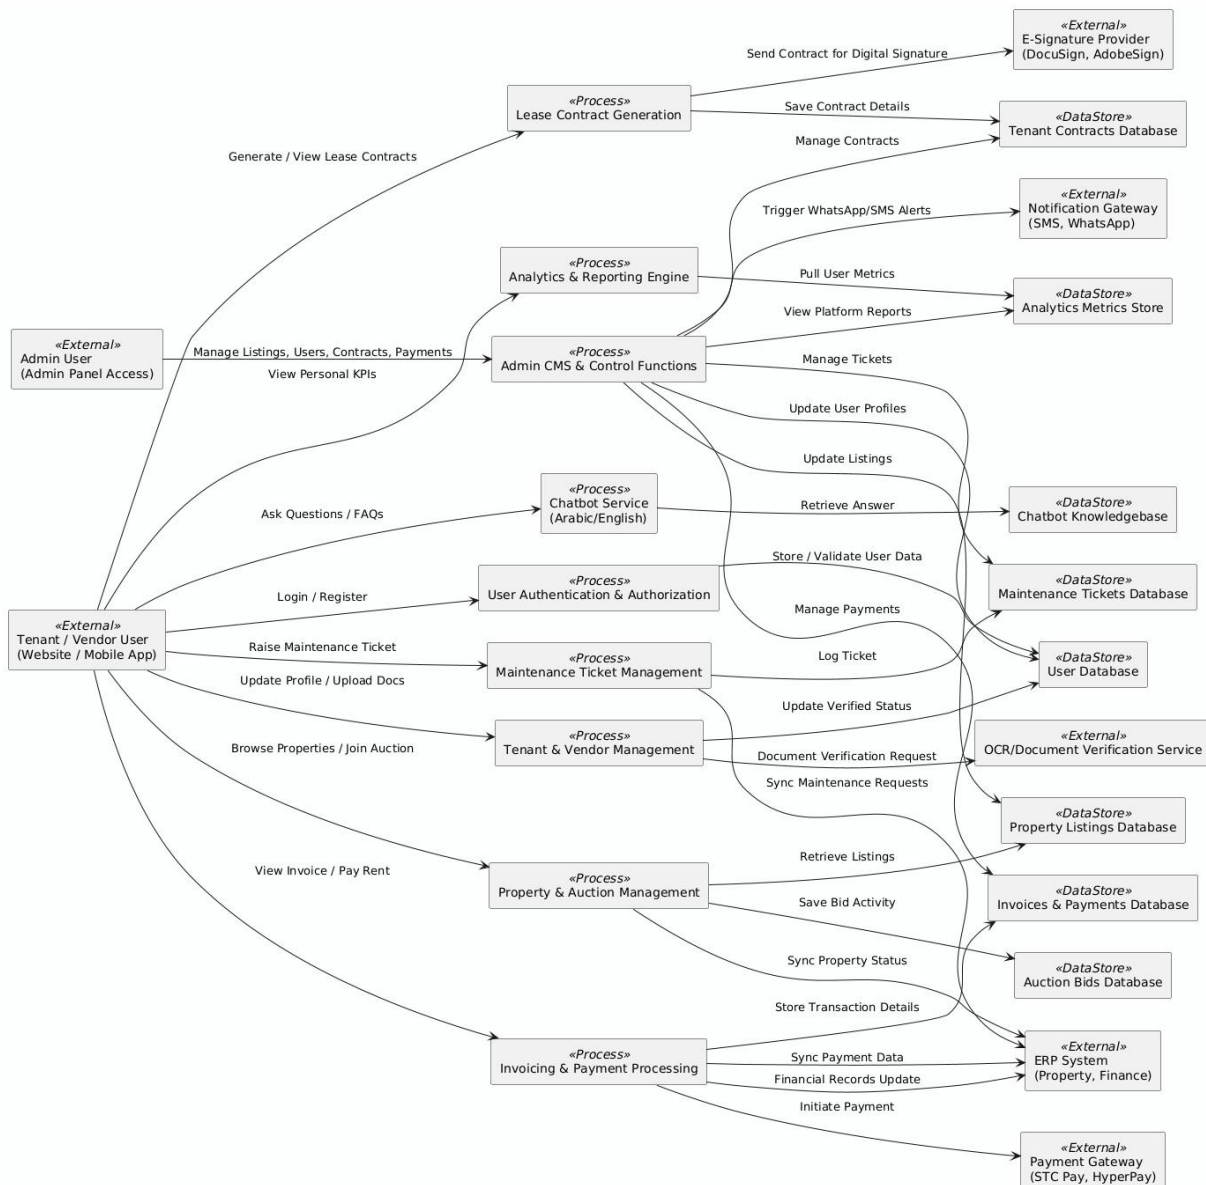

## Non-Functional Details:

| ID     | Category             | Requirement                      | Description   | Priority |
|--------|----------------------|----------------------------------|---|----------|
| NFR-01 | Performance          | System Scalability               | Platform must support 10,000+ concurrent users across Web and Mobile.                   | High     |
| NFR-02 | Performance          | Response Time                    | System pages should load within 3 seconds under normal load conditions.                 | High     |
| NFR-03 | Availability         | High Availability                | Platform must guarantee at least 99.9% uptime with auto-scaling infrastructure.         | High     |
| NFR-04 | Availability         | Disaster Recovery                | Recovery Time Objective (RTO) < 4 hours; Recovery Point Objective (RPO) < 1 hour.       | High     |
| NFR-05 | Security             | Data Encryption                  | All sensitive data must be encrypted at rest and in transit (SSL/TLS 1.2+).             | High     |
| NFR-06 | Security             | Authentication and Authorisation | OAuth 2.0 / JWT-based secure access with role-based access controls.                    | High     |
| NFR-07 | Security             | Compliance                       | Full compliance with Saudi PDPL, Ejar, VAT, and GDPR where applicable.                  | High     |
| NFR-08 | Security             | Audit Trails                     | All critical operations must be logged with timestamps and user IDs.                    | High     |
| NFR-09 | Usability            | Multilingual Support             | Full Arabic and English user interface across Website, Portal, and Mobile App.          | High     |
| NFR-10 | Usability            | Mobile Responsiveness            | Portal and Website must be fully responsive across devices and browsers.                | High     |
| NFR-11 | Maintainability      | Modular Architecture             | Code must be organised into modules/micro services for easy maintenance and upgrades.   | High     |
| NFR-12 | Maintainability      | Documentation                    | Complete system documentation (architecture, codebase, API docs, user manuals).         | High     |
| NFR-13 | Maintainability      | Automated Testing                | Automated unit, integration, performance, and security tests via CI/CD pipelines.       | Medium   |
| NFR-14 | Interoperability     | API-First Design                 | System must provide RESTful APIs for integrations with ERP, CRM, payment gateways, etc. | High     |
| NFR-15 | Backup and Recovery  | Automated Daily Backups          | Full system backups must run daily with easy restore capabilities.                      | High     |
| NFR-16 | Legal and Compliance | Intellectual Property Ownership  | All source code, documentation, and assets  | High     |

|        |                   |                                 |  |        |
|--------|-------------------|---------------------------------|--|--------|
|        |                   |                                 | must be owned by AI Fauzan Real Estate.  |        |
| NFR-17 | System Updates    | Zero Downtime Deployments       | Deployment strategies must minimise or eliminate downtime (Blue-Green Deployment preferred). | Medium |
| NFR-18 | System Monitoring | Real-Time Monitoring            | Integrate real-time health and performance monitoring dashboards and alert systems.          | High   |
| NFR-19 | User Support      | Helpdesk & Ticketing SLA        | Integrated ticketing system with defined SLA tracking for complaints and maintenance.        | High   |
| NFR-20 | Localization      | Date, Time, and Currency Format | System must support Saudi Arabian standards (Hijri/Gregorian dates, SAR currency).           | High   |

DFD:

## Integration Details:

| ID     | Module/Feature                   | Integration Point                 | Description  | Type               | Technologies /Tools                          |
|--------|----------------------------------|-----------------------------------|--|--------------------|--|
| INT-01 | Online Payments (Portal, Mobile) | Payment Gateway Integration       | Integration with payment gateways for token payments, rent, and service fees.                                      | External API       | Hyperpay, STC Pay, Stripe, or similar        |
| INT-02 | Chatbot (Web, Mobile, Portal)    | AI/NLP Chatbot Integration        | Integration with AI Chatbot for bilingual (Arabic/English) tenant/vendor support.                                  | External API       | Dialogflow, Rasa, or Microsoft Bot Framework |
| INT-03 | Live Auctions (Website)          | Real-Time Bidding Engine          | WebSocket/Fire base integration for real-time property bidding.  | Realtime Messaging | Firebase Realtime DB, WebSocket              |
| INT-04 | CRM System (Lead Management)     | CRM Integration                   | Push lead inquiries and contact forms data into internal CRM systems.  | External API       | Salesforce, Zoho CRM, HubSpot                |
| INT-05 | E-Signature (Contracts)          | E-Signature Integration           | Integration for digitally signing lease, auction, and maintenance contracts.                                       | External API       | DocuSign, Adobe Sign, HelloSign              |
| INT-06 | ERP System (Core Operations)     | ERP Custom Integration            | Integration between automation platform and internal custom ERP modules for finance, leasing, property management. | Internal APIs      | REST APIs, JSON, XML, Swagger/OpenAPI        |
| INT-07 | SMS Notifications                | SMS Gateway Integration           | SMS alerts for invoices, maintenance updates, auctions.  | External API       | Twilio, Unifonic, Nexmo                      |
| INT-08 | WhatsApp Notifications           | WhatsApp Business API Integration | WhatsApp alerts for payments, auctions, maintenance updates.   | External API       | WhatsApp Cloud API, Twilio WhatsApp          |

|        |                                |                                      |  |                                    |  |
|--------|--------------------------------|--------------------------------------|--|------------------------------------|--|
| INT-09 | ID Verification (Onboarding)   | OCR & AI Document Verification       | External verification for Iqama, National ID, CR documents through AI-based OCR. | External API                       | AnyVision, Onfido, HyperVerge                                  |
| INT-10 | Document Management            | Document Storage Integration         | Integration with secure document storage and versioning system.                  | Internal/External API              | AWS S3, Azure Blob Storage                                     |
| INT-11 | Analytics Dashboard            | Data Visualisation Tools Integration | Dashboards pulling analytics data from internal database and API layers.         | Internal Reporting                 | Power BI, Tableau, or custom chart libraries (D3.js, Chart.js) |
| INT-12 | Maintenance SLA Tracking       | SLA Engine Integration               | Workflow tool integration for maintenance and support SLA monitoring.            | Internal Module                    | Custom SLA engines, Business Process Automation (BPA) Tools    |
| INT-13 | Authentication & SSO           | Single Sign-On (SSO) Integration     | Unified authentication using OAuth 2.0 and JWT standards.                        | Internal Security                  | OAuth 2.0, OpenID Connect                                      |
| INT-14 | Backup and Disaster Recovery   | Cloud Backup Integration             | Integration with cloud backup providers for automated daily backups.             | External Service                   | AWS Backup, Azure Recovery Services                            |
| INT-15 | Hosting & Cloud Infrastructure | Cloud Infrastructure Provisioning    | Integration with cloud service providers for scalable and secure hosting.        | Infrastructure as a Service (IaaS) | AWS, Microsoft Azure, GCP                                      |

## High-Level API List:

| API Category   | API Name    | Endpoint (Example) | Method | Description                                      | Input Parameters      | Output/Response                           |
|----------------|-------------|--------------------|--------|--|-----------------------|---|
| Authentication | User Login  | /api/auth/login    | POST   | Authenticate user with email/phone and password. | email/phone, password | Access Token, Refresh Token, User Profile |
| Authentication | User Logout | /api/auth/logout   | POST   | Invalidate access token.                         | access_token          | Logout confirmation                       |

|                     |                           |                                      |       |  |   |   |
|---------------------|---------------------------|--------------------------------------|-------|--|---|---|
| Authentication      | Token Refresh             | /api/auth/refresh                    | POST  | Refresh expired access token.                                      | refresh_token                                   | New Access Token, Refresh Token           |
| Property Management | List Properties           | /api/properties                      | GET   | Fetch available properties with filters (city, type, price range). | filters (optional)                              | List of properties with metadata          |
| Property Management | Property Details          | /api/properties/{id}                 | GET   | Fetch detailed information of a single property.                   | property_id                                     | Property detail object                    |
| Auction Management  | Start Auction             | /api/auctions/start                  | POST  | Start a live auction for a specific property.                      | property_id, reserve_price, start_time          | Auction created confirmation              |
| Auction Management  | Place Bid                 | /api/auctions/{auction_id}/bid       | POST  | Place a bid in an ongoing auction.                                 | auction_id, bid_amount                          | Bid confirmation, current highest bid     |
| Auction Management  | Auction Status            | /api/auctions/{auction_id}/status    | GET   | Get real-time status of an auction.                                | auction_id                                      | Auction status (open/closed), highest bid |
| Tenant Portal       | Tenant Dashboard Data     | /api/tenant/dashboard                | GET   | Fetch current rental status, payment history, contract info.       | tenant_id (session based)                       | Dashboard metrics and records             |
| Tenant Portal       | Submit Maintenance Ticket | /api/maintenance/tickets             | POST  | Submit a new maintenance request with optional photo upload.       | tenant_id, issue_description, photos (optional) | Ticket creation confirmation              |
| Maintenance         | Update Ticket Status      | /api/maintenance/tickets/{ticket_id} | PATCH | Update the status or notes of a maintenance request.               | ticket_id, status, notes                        | Updated ticket details                    |

|                       |                                |                              |      |   |                                       |                                   |
|-----------------------|--------------------------------|------------------------------|------|---|---------------------------------------|-----------------------------------|
| Payment Management    | Create Invoice                 | /api/payments/invoice/create | POST | Generate an invoice for rent or services.             | tenant_id, amount, service_details    | Invoice ID and payment link       |
| Payment Management    | Payment Callback/Webhook       | /api/payments/callback       | POST | Handle payment confirmation from gateway.             | payment_id, status, amount            | Payment success/failure status    |
| User Management       | Update User Profile            | /api/users/profile/update    | PUT  | Update profile info like address, phone, preferences. | user_id, profile_data                 | Updated user profile confirmation |
| Chatbot Service       | FAQ Query                      | /api/chatbot/faq             | POST | AI-powered response to FAQs or service queries.       | question, context (optional)          | Bot response text                 |
| Notification Service  | Send SMS/WhatsApp Notification | /api/notifications/send      | POST | Send system notifications to users.                   | user_id, message, type (SMS/WhatsApp) | Delivery status                   |
| Vendor Management     | Vendor Onboarding              | /api/vendors/onboard         | POST | New vendor registration and document submission.      | vendor_data, documents                | Vendor ID and onboarding status   |
| Analytics & Reporting | Fetch KPI Dashboard Data       | /api/analytics/kpis          | GET  | Pull analytics data (occupancy, complaints, revenue). | admin_id (auth)                       | KPI metrics and charts            |
| ERP Integration       | Sync Property Lease Data       | /api/erp/leases/sync         | POST | Sync lease contracts and payment info to ERP system.  | lease_data, tenant_data, payment_data | ERP sync confirmation             |
| Identity Verification | OCR Document Scan              | /api/verification/ocr        | POST | Extract details from ID/Iqama/CR documents using OCR. | document_image                        | Extracted data fields             |

| ID     | Module            | Test Type              | Description   | Scope  | Priority |
|--------|-------------------|------------------------|---|--|----------|
| TST-01 | Mobile App        | Functional Testing     | Validate all tenant/vendor workflows: onboarding, payments, maintenance requests.                 | App screens, APIs, chatbot, push notifications | High     |
| TST-02 | Mobile App        | Usability Testing      | Evaluate mobile app user experience (ease of navigation, layout clarity, Arabic/English support). | All screens and user flows                     | High     |
| TST-03 | Mobile App        | Security Testing       | Test authentication, authorization, payment security, encryption of sensitive data.               | Login, payment, token management, data storage | High     |
| TST-04 | Mobile App        | Compatibility Testing  | Test on multiple devices (iOS, Android), various OS versions, and screen sizes.                   | 10+ devices (phones, tablets)                  | High     |
| TST-05 | Portal (Tenant)   | Functional Testing     | Verify dashboard, maintenance ticket creation, rent payments, contract management workflows.      | Portal dashboards, forms, APIs                 | High     |
| TST-06 | Portal (Internal) | Workflow Testing       | Ensure role-based workflows (leasing, maintenance, finance) are assigned and escalated properly.  | Leasing, finance, maintenance workflows        | High     |
| TST-07 | Portal (Internal) | Security Testing       | Validate role-based access (RBAC) and secure document storage, internal audit trails.             | User roles, document verification modules      | High     |
| TST-08 | Website           | Functional Testing     | Test property search, auctions, user registration, inquiry submissions, chatbot interaction.      | Public pages, live auction pages, CMS content  | High     |
| TST-09 | Website           | Performance Testing    | Test page load speeds, response times during peak traffic (5k-10k concurrent users).              | Home, property listings, auctions              | High     |
| TST-10 | Website           | SEO Validation Testing | Validate SEO meta tags, structured data   | All public pages                               | Medium   |

|  |  |  |                                |  |  |
|--|--|--|--------------------------------|--|--|
|  |  |  | (schema), sitemap correctness. |  |  |
|--|--|--|--------------------------------|--|--|

|        |             |                               |   |  |        |
|--------|-------------|-------------------------------|---|--|--------|
| TST-11 | Admin Panel | Functional Testing            | Verify content management (properties, news, banners), user management, invoicing, analytics. | Admin screens, form inputs, bulk operations  | High   |
| TST-12 | Admin Panel | Workflow Testing              | Test property listing publishing, auction creation, contract template management workflows.   | CMS, auction management, contract management | High   |
| TST-13 | Admin Panel | Security Testing              | Validate sensitive admin functionalities (user rights, audit logs, data exports).             | Admin user actions, access logs              | High   |
| TST-14 | All Modules | Localization Testing          | Validate Arabic and English content rendering, date formats, currency display.                | All user-facing modules                      | High   |
| TST-15 | All Modules | Accessibility Testing         | Test compliance with accessibility standards (screen readers, keyboard navigation).           | Public website, portals, mobile apps         | Medium |
| TST-16 | All Modules | API Integration Testing       | Test end-to-end API requests/responses across modules (auth, property, payment, auction).     | API endpoints, payloads, error handling      | High   |
| TST-17 | All Modules | Backup & Recovery Testing     | Test automated backups and restoration processes.   | Database backups, file restores              | High   |
| TST-18 | All Modules | Penetration Testing           | Conduct vulnerability assessments to identify and fix potential security gaps.                | Web, Mobile, Portal, APIs                    | High   |
| TST-19 | All Modules | Regression Testing            | Ensure new changes do not break existing features (automated and manual).                     | Full system testing after deployments        | High   |
| TST-20 | All Modules | User Acceptance Testing (UAT) | Final round of testing by business users to approve functionality before launch.              | Full platform review                         | High   |

## Risk Assessment and Mitigation Plan:

| Risk ID | Category              | Risk Description  | Impact | Likelihood | Mitigation Strategy   | Owner              |
|---------|-----------------------|---|--------|------------|---|--------------------|
| RSK-01  | Technical             | Integration with payment gateways may fail.                 | High   | Medium     | Conduct early API testing, involve gateway support teams, and keep backup gateways ready.         | Technical Lead     |
| RSK-02  | Technical             | Real-time auction platform performance issues at high load. | High   | Medium     | Stress test auction modules early, optimize WebSocket/Firebase performance, scale infrastructure. | DevOps Lead        |
| RSK-03  | Regulatory Compliance | Non-compliance with PDPL or VAT regulations.                | High   | Low        | Engage compliance specialists, perform periodic audits, document all processes.                   | Compliance Officer |
| RSK-04  | Project Management    | Delays in development causing milestone slippage.           | High   | Medium     | Implement Agile sprints, weekly status reviews, contingency buffer in timeline.                   | Project Manager    |
| RSK-05  | Security              | Data breach or cyberattack.                                 | High   | Low        | Penetration testing, SSL/TLS encryption, OAuth/JWT security layers, regular security audits.      | Security Lead      |

|        |                        |  |        |        |  |                           |
|--------|------------------------|--|--------|--------|--|---------------------------|
| RSK-06 | Resource               | Key developer or technical staff attrition.  | Medium | Medium | Cross-train team members, maintain detailed technical documentation, have backup staffing plans. | HR Manager                |
| RSK-07 | Usability              | Bilingual (Arabic/English) content inconsistencies.                                      | Medium | High   | Thorough localization testing, involve native Arabic speakers in QA.                             | QA Lead                   |
| RSK-08 | Vendor Management      | Poor vendor compliance for third-party services (e.g., document verification providers). | Medium | Medium | Perform vendor due diligence, create strict onboarding checks, and set SLAs.                     | Vendor Manager            |
| RSK-09 | System Operations      | Backup/Recovery failure leading to data loss.  | High   | Low    | Automated daily backups, regular restore tests, cloud disaster recovery plans.                   | IT Infrastructure Manager |
| RSK-10 | Client Communication   | Misalignment between client expectations and delivered product.                          | High   | Medium | Regular demos, transparent documentation, and formal scope change control process.               | Account Manager           |
| RSK-11 | Mobile Device Coverage | App compatibility issues across multiple Android/iOS devices.                            | Medium | Medium | Maintain device testing matrix, test across at least 90% market                                  | Mobile App QA Lead        |

|        |                   |  |        |        |   |                             |
|--------|-------------------|--|--------|--------|---|-----------------------------|
|        |                   |  |        |        | coverage devices.   |                             |
| RSK-12 | Budget            | Project cost overrun.  | High   | Low    | Track costs bi-weekly, define strict change request approval process.                         | Finance Manager             |
| RSK-13 | Infrastructure    | Cloud hosting cost spikes due to auto-scaling.                         | Medium | Low    | Set resource quotas, monitor cloud costs proactively, configure scaling thresholds carefully. | DevOps Lead                 |
| RSK-14 | End User Adoption | Low adoption of new systems (Tenant Portal, Mobile App, Admin Portal). | Medium | Medium | Run onboarding webinars, user guides, interactive tutorials, and in-app support.              | Training & Adoption Manager |

## Security Matrix:

| Security Area        | Threat                           | Mitigation Strategy                                       | Implementation Details   | Tools/Technologies                     |
|----------------------|----------------------------------|---|--|--|
| Authentication       | Unauthorised access to system    | Implement OAuth 2.0 / JWT token-based authentication.     | Secure login with token expiry, refresh token mechanism, multi-factor authentication (MFA) for Admins. | OAuth 2.0, JWT, Auth0, Okta            |
| Authorisation (RBAC) | Privilege escalation             | Role-Based Access Control with strict permission mapping. | Fine-grained access control; verify role before granting resource access.                              | Custom RBAC modules, Keycloak          |
| Data in Transit      | Man-in-the-middle (MITM) attacks | Enforce HTTPS (SSL/TLS 1.2+) for all communications.      | SSL certificates, automatic renewal, strict HTTPS redirects.   | Let's Encrypt, AWS ACM, Cloudflare SSL |

|                       |                                    |  |   |   |
|-----------------------|------------------------------------|--|---|---|
| Data at Rest          | Data theft or leaks from database  | Encrypt sensitive data at rest using database encryption features.         | Field-level encryption (tenant data, payment details, documents).                                     | PostgreSQL TDE, Azure SQL Encryption, AWS KMS               |
| Identity Verification | Forged documents, fake users       | AI-based OCR verification and facial recognition.                          | Validate uploaded documents and match with user selfies (optional).                                   | AnyVision, Onfido, HyperVerge                               |
| Session Management    | Session hijacking                  | Short session timeouts, refresh tokens, secure cookie attributes.          | Implement HttpOnly, Secure, SameSite cookie flags.  | Express.js Security Middleware, OWASP best practices        |
| APIs                  | Unauthorised API access or abuse   | API Gateway with rate limiting, authentication, and IP whitelisting.       | Secure API access keys, monitor API usage logs.   | AWS API Gateway, Kong Gateway, WAF                          |
| Mobile App Security   | Code injection, data leakage       | Code obfuscation, secure API calls, encrypted storage.                     | Obfuscate Android/iOS app code, encrypt API keys, use secure local storage (e.g., Keychain/Keystore). | ProGuard, R8, Secure Store (iOS Keychain, Android Keystore) |
| User Data Privacy     | PDPL/GDPR violation                | Consent management, right to be forgotten, data anonymisation.             | Users manage data preferences, request account deletion.  | Custom Consent Management Systems                           |
| Payment Security      | Payment fraud                      | PCI-DSS compliance, tokenised payment processing, secure callbacks.        | End-to-end encryption for payment flows, validate callback integrity.                                 | Stripe, HyperPay, STC Pay, PCI-DSS                          |
| Backup & Recovery     | Data loss during system crash      | Daily automated backups, disaster recovery plan.                           | Scheduled backup scripts, real-time replication, regular restore tests.                               | AWS Backup, Azure Site Recovery                             |
| Cloud Infrastructure  | Unauthorised cloud access          | IAM roles, least privilege principle, encryption of environment variables. | Enable CloudTrail/Cloud Watch logs, restrict SSH access via VPN.                                      | AWS IAM, Azure RBAC, VPC Security Groups                    |
| Admin Panel Access    | Brute-force attacks on Admin Login | CAPTCHA implementation, account lockout                                    | Brute-force protection  | Google reCAPTCHA,   |

|                     |                                |  |   |   |
|---------------------|--------------------------------|--|---|---|
|                     |                                | after X failed attempts.   | middleware, 2FA for critical users.                             | Custom Middleware   |
| Monitoring & Alerts | Delayed threat detection       | Real-time monitoring and alerts for anomalies and intrusion attempts.                    | Monitor server logs, authentication attempts, failed API calls. | AWS CloudWatch, Sentry, NewRelic, Datadog                   |
| Audit Trails        | Lack of traceability in system | Maintain audit logs for all critical actions (user updates, payments, contract changes). | Tamper-proof logs with timestamps, user IDs, IP addresses.      | ELK Stack (Elasticsearch, Logstash, Kibana), AWS CloudTrail |

#### Important Note:

Many of the controls also help you comply with PDPL (Saudi Personal Data Protection Law) and GDPR requirements, automatically ensuring regulatory alignment!

#### Assumptions and Dependencies Assumptions:

| ID   | Assumption  | Details   |
|------|---|---|
| A-01 | Timely Access to Client Information                         | Client will provide timely access to business workflows, leasing templates, legal documents, and branding materials.                      |
| A-02 | Fixed Scope for Initial Phases                              | Scope of Phase 1, Phase 2, and Phase 3 deliverables will remain stable unless formally changed via the change control process.            |
| A-03 | Third-Party API Availability                                | Payment gateways, OCR verification, SMS/WhatsApp providers, and cloud services will have stable, reliable APIs available for integration. |
| A-04 | Regulatory Requirements Stay Consistent                     | Saudi PDPL, Ejar, VAT, and GDPR regulations will not significantly change during the project timeline.                                    |
| A-05 | Client Testing Participation                                | Client stakeholders will participate in User Acceptance Testing (UAT) and provide feedback promptly.                                      |
| A-06 | Language Assets Provided by Client                          | Arabic translations for website/app content will be validated or provided by client team.   |
| A-07 | Hosting Environment Provisioning                            | Hosting infrastructure (AWS/Azure) will be made available early to allow environment setup and testing.                                   |
| A-08 | ERP Customisation Requirements Finalised Before Development | ERP modules will have finalised workflows and reporting requirements before build begins.   |
| A-09 | Mobile Device Coverage Agreement                            | Devices/OS versions for mobile app testing will be approved and listed by client to cover key target users.                               |

#### Dependencies:

| ID   | Dependency                | Details  |
|------|---------------------------|--|
| D-01 | Payment Gateway Providers | HyperPay, STC Pay, Stripe (or selected provider) APIs must be functional and documentation must be accessible. |

|      |   |   |
|------|---|---|
| D-02 | OCR and ID Verification Services                                      | Third-party OCR and ID verification services must be available, stable, and support Saudi national documents. |
| D-03 | Hosting Infrastructure (AWS, Azure, or Client-Provided)               | Reliable cloud hosting infrastructure must be provisioned with sufficient scaling and backup capabilities.    |
| D-04 | ERP System Readiness  | Integration points and data sync rules for ERP (property leasing, financials) must be confirmed early.        |
| D-05 | SMS and WhatsApp Notification Gateways                                | SMS/WhatsApp provider setup must be completed to enable real-time notifications.                              |
| D-06 | E-Signature Provider Selection  | Selected e-signature provider (DocuSign, AdobeSign, etc.) APIs must be integrated and tested.                 |
| D-07 | Bilingual Content Review  | All Arabic-English translations must be validated by client reviewers for marketing and legal consistency.    |
| D-08 | Client IT Support for On-Premise Systems (if any hybrid model needed) | Client IT team must assist if hybrid infrastructure (cloud + internal systems) is required.                   |
| D-09 | Regulatory Compliance Changes (External Dependency)                   | If PDPL, Ejar, VAT, or GDPR rules change, project scope and system adjustments will be reassessed.            |

## SLA – Issue Response & Resolution (Post-Deployment Support):

| Severity      | Definition  | Examples (Project-Specific)   | Impact Level                            | Initial Response Time | Resolution Target  | Communication Expectation                                      | Escalation Level                                     |
|---------------|---|---|---|-----------------------|--------------------|--|--|
| P1 – Critical | Platform is completely or partially unavailable. Business-critical operations halted. No workaround exists. | <ul style="list-style-type: none"> <li>- Admin panel inaccessible</li> <li>- Payment gateway integration failure</li> <li>- Live auction engine crashes</li> <li>- Contract signing system down</li> <li>- Login failure for all users</li> </ul> | System-wide impact, all users affected. | ≤ 1 hour              | ≤ 4 business hours | Acknowledgment via email + call; hourly updates until resolved | Escalated to Project Manager + Tech Lead immediately |

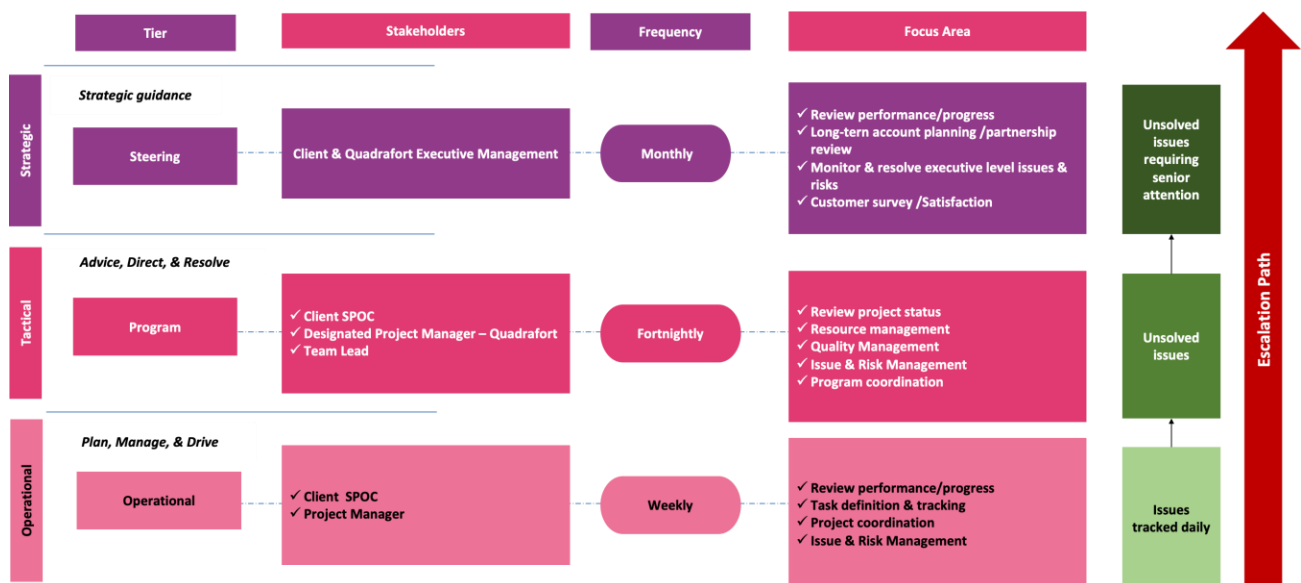

|             |   |  |  |                   |   |   |   |
|-------------|---|--|--|-------------------|---|---|---|
| P2 – High   | Core module is degraded, but partial functionality remains. A workaround is possible but disrupts normal usage. | <ul style="list-style-type: none"> <li>- Lease contract generation fails for some tenants</li> <li>- Property listings not loading for</li> </ul>  | Major functional area impaired, many users affected. | ≤ 4 hours         | ≤ 1 business day                        | Email acknowledgment within 4 hours; updates every 4–6 hours      | Assigned to QA + Dev Lead with PM oversight |
|             |   | some regions<br><ul style="list-style-type: none"> <li>- Maintenance ticket assignment not functioning</li> <li>- Mobile app login works, but dashboard doesn't load</li> </ul>  |  |                   |   |   |   |
| P3 – Medium | Non-critical functionality is impaired. User has a workaround. System still operational.                        | <ul style="list-style-type: none"> <li>- Notifications delayed (SMS/Whats App)</li> <li>- Document upload fails on specific browsers</li> <li>- Arabic labels not rendering correctly</li> <li>- Data sync delay between ERP and portal</li> </ul> | Limited user group or minor modules affected.        | ≤ 1 business day  | ≤ 3 business days                       | Email acknowledgment within 1 business day; updates as needed     | Assigned to relevant module owner           |
| P4 – Low    | Cosmetic or UI/UX issues. No functional impact. Tracked for future release.                                     | <ul style="list-style-type: none"> <li>- Typos or incorrect content</li> <li>- Button alignment off</li> <li>- FAQ link misdirects</li> <li>- Inactive menu hover effects</li> </ul>   | No business impact.                                  | ≤ 2 business days | ≤ 7 business days or next patch release | Email acknowledgment within 2 days; grouped into scheduled update | Added to backlog, reviewed weekly           |

## SLA Governance Notes:

| Category         | Details   |
|------------------|---|
| Coverage         | SLA applies to Website, Portal, Mobile Apps, Admin Panel, and API integrations post go-live.                          |
| Support Window   | Sunday – Thursday, 9 AM – 6 PM (KSA time). Critical P1 issues monitored 24/7.   |
| Channels         | Support Portal, Email, Dedicated WhatsApp group (for P1 escalations), Weekly reporting                                |
| Hypercare Period | First 4 weeks post go-live: Priority given to all incidents, with P1–P2 monitored continuously during business hours. |

|                        |   |
|------------------------|---|
| Monitoring Tools       | Uptime Monitoring (Pingdom/NewRelic), Error Logging (Sentry), Alerting System (PagerDuty/CloudWatch)              |
| Issue Tracking         | All incidents tracked in a shared Issue Tracker (ClickUp/Jira/Excel), visible to both teams.                      |
| Change Request Trigger | If resolution requires out-of-scope dev work (e.g., new integration), formal Change Request process is triggered. |
| SLA Breach Policy      | Documented and reviewed in weekly project governance meetings. Recurrent SLA breaches flagged for escalation.     |

## Governance Framework

## Team Structure:

| Role                                   | Responsibilities   | Team Size                 |
|--|--|---------------------------|
| Project Manager                        | <ul style="list-style-type: none"> <li>- Oversee overall project delivery.</li> <li>- Manage timelines, scope, budget.</li> <li>- Communicate with client and stakeholders.</li> <li>- Manage risk, changes, and reporting.</li> </ul>             | 1                         |
| Technical Architect                    | <ul style="list-style-type: none"> <li>- Define system architecture.</li> <li>- Select technology stack and tools.</li> <li>- Review technical designs.</li> <li>- Ensure scalability, security, and compliance.</li> </ul>                        | 1                         |
| Solution Consultant / Business Analyst | <ul style="list-style-type: none"> <li>- Gather and document business and functional requirements.</li> <li>- Translate client needs into system specifications (FRD, BRD).</li> <li>- Validate deliverables against requirements.</li> </ul>      | 1                         |
| UI/UX Designer                         | <ul style="list-style-type: none"> <li>- Design mobile-first, bilingual (Arabic/English) interfaces.</li> <li>- Create user flows, wireframes, mockups, and interactive prototypes.</li> <li>- Ensure accessibility and responsiveness.</li> </ul> | 1                         |
| Frontend Developer (Web/Portal)        | <ul style="list-style-type: none"> <li>- Build responsive web interfaces (Website, Tenant Portal, Vendor Portal, Admin Panel).</li> <li>- Implement SEO optimisation, CMS integration.</li> </ul>  | 2                         |
|  | <ul style="list-style-type: none"> <li>- Integrate APIs with UI components.</li> </ul>   |                           |
| Mobile App Developer                   | <ul style="list-style-type: none"> <li>- Develop native or hybrid mobile apps for iOS and Android.</li> <li>- Implement in-app payments, chatbot, notifications.</li> <li>- Optimise performance across devices.</li> </ul>                        | 2                         |
| Backend Developer                      | <ul style="list-style-type: none"> <li>- Develop APIs, ERP integrations, user management, auctions, invoicing, notifications, backups.</li> <li>- Implement security standards (OAuth2.0, SSL/TLS, JWT).</li> </ul>                                | 2                         |
| DevOps Engineer                        | <ul style="list-style-type: none"> <li>- Setup and manage cloud infrastructure (AWS/Azure).</li> <li>- Implement CI/CD pipelines.</li> <li>- Configure auto-scaling, monitoring, and disaster recovery systems.</li> </ul>                         | 1                         |
| QA Engineer (Manual + Automation)      | <ul style="list-style-type: none"> <li>- Write and execute test cases (Functional, API, Security, Usability, Regression).</li> <li>- Set up automated testing for mobile and web.</li> <li>- Conduct cross-device/browser testing.</li> </ul>      | 2                         |
| Security Specialist                    | <ul style="list-style-type: none"> <li>- Perform penetration testing.</li> <li>- Configure monitoring, audit logs.</li> <li>- Validate data encryption, secure authentication, compliance adherence.</li> </ul>                                    | 1 (Part-Time)             |
| Content Manager (CMS Admin)            | <ul style="list-style-type: none"> <li>- Manage property listings, news updates, FAQ content.</li> <li>- Coordinate Arabic/English content publishing.</li> <li>- Ensure website/portal content freshness.</li> </ul>                              | 1 (Optional, Client Side) |
| Training & Adoption Manager            | <ul style="list-style-type: none"> <li>- Prepare user guides, run onboarding webinars.</li> <li>- Conduct training sessions for Admin, Leasing, Support Teams.</li> <li>- Drive platform adoption with stakeholders.</li> </ul>                    | 1 (Optional, Short-Term)  |

## Timeline:

### Phase 1: Website Transformation, Tenant Portal & Live Auction Module:

| Task   | Responsible Role(s)                                    | Start Week | End Week |
|--|--|------------|----------|
| Project Kick-off & Requirement Gathering                       | Project Manager, Business Analyst, Solution Consultant | Week 1     | Week 1   |
| Architecture & Technical Design                                | Technical Architect, DevOps Engineer                   | Week 2     | Week 2   |
| UI/UX Design for Website & Portals                             | UI/UX Designer   | Week 2     | Week 2   |
| Website Development (Frontend, Auction Module)                 | Frontend Developers, Backend Developers                | Week 2     | Week 2   |
| Tenant Portal Development (Dashboard, Maintenance, Contracts)  | Frontend Developers, Backend Developers                | Week 3     | Week 3   |
| Admin Panel CMS Setup  | Backend Developers, Frontend Developers                | Week 3     | Week 3   |
| Integration Setup (Payment Gateway, Chatbot, OCR Verification) | Backend Developers, Integration Specialist             | Week 3     | Week 3   |
| Internal QA Testing (Website, Tenant Portal, Auction Module)   | QA Engineers   | Week 3     | Week 3   |
| UAT (Website, Portal, Auctions)                                | QA Engineers, Client UAT Team                          | Week 4     | Week 4   |
| Go-Live: Website + Tenant Portal + Live Auction                | Full Team  | Week 4     | Week 4   |

### Phase 2: Core Automation (Invoicing, Contracts, Chatbot, Vendor Tools):

| Task  | Responsible Role(s)                        | Start Week | End Week |
|---|--|------------|----------|
| Core Automation Module Development (Invoicing & Payments) | Backend Developers                         | Week 5     | Week 5   |
| Dynamic Contract Generation & E-Signature Integration     | Backend Developers, Integration Specialist | Week 5     | Week 5   |
| AI-Powered Chatbot Deployment                             | Backend Developers, Integration Specialist | Week 5     | Week 5   |
| Vendor Management Tools Development                       | Backend Developers, Frontend Developers    | Week 6     | Week 6   |

|   |   |        |        |
|---|---|--------|--------|
| Mobile App Development (Tenant + Vendor Apps)         | Mobile App Developers, Backend Developers | Week 7 | Week 8 |
| Internal Maintenance & Staff Workflow Automation      | Backend Developers, QA Engineers          | Week 8 | Week 8 |
| Internal QA Testing (Automation Modules, Mobile Apps) | QA Engineers                              | Week 8 | Week 8 |
| UAT for Automation Modules and Mobile Apps            | QA Engineers, Client UAT Team             | Week 8 | Week 8 |
| Go-Live: Core Automation Modules + Mobile Apps        | Full Team                                 | Week 8 | Week 8 |

**Phase 3: Analytics, Communication Automation & Admin Control:**

| Task   | Responsible Role(s)                        | Start Week | End Week |
|--|--|------------|----------|
| Analytics Dashboard Development (Occupancy, Payments, KPIs)                      | Backend Developers, Data Analyst           | Week 9     | Week 9   |
| Communication Automation (WhatsApp/SMS/ Email Alerts Setup)                      | Backend Developers, Integration Specialist | Week 9     | Week 9   |
| Mobile App Enhancements (Notifications, Virtual Meeting Scheduler)               | Mobile App Developers                      | Week 10    | Week 11  |
| Admin Control Panel Enhancements (Access Logs, Audit Trails, Content Management) | Backend Developers, QA Engineers           | Week 11    | Week 11  |
| System-Wide Penetration Testing & Load Testing                                   | Security Specialist, QA Engineers          | Week 11    | Week 11  |
| Final UAT (Full Platform with Analytics, Admin Control)                          | QA Engineers, Client UAT Team              | Week 11    | Week 11  |

|  |           |         |         |
|--|-----------|---------|---------|
| Final Go-Live<br>(Analytics +<br>Communication<br>Automation +<br>Admin Control<br>Enhancements) | Full Team | Week 12 | Week 12 |
|--|-----------|---------|---------|

#### Annual Support Contract & Roadmap Consultation Scope of the Annual Support Contract:

The vendor offers an optional Annual Support Contract to ensure long-term system reliability, performance enhancement, feature roadmap planning, and advisory collaboration.

#### Included Services:

| Category                            | Description  |
|-------------------------------------|--|
| Technical Support                   | Ongoing bug fixing, performance tuning, environment monitoring, uptime management        |
| Preventive Maintenance              | Security patches, code refactoring, deprecated API audits, SSL renewal                   |
| Feature Optimisation                | Feedback-driven improvements to existing modules, layout/UI fixes                        |
| Incident Management                 | Handling production issues, regression testing after changes, issue trend analysis       |
| Third-Party Integration Maintenance | Monitoring and updating integrations with payment gateways, OCR services, ERP sync, etc. |
| Mobile App Store Management         | Update publishing, compliance with app store policies, version tracking                  |
| Knowledge Base Management           | Updating user manuals, admin guides, FAQs (Arabic/English) as features evolve            |

#### Roadmap Consultation Services (Quarterly Advisory)

The vendor will provide quarterly strategic advisory sessions to help shape the client's digital roadmap based on usage analytics, industry benchmarks, and user behavior data.

#### Roadmap Consultation Includes:

| Deliverable                    | Description   |
|--------------------------------|---|
| Platform Usage Report          | Dashboard and API usage analysis, high-traffic features, error trend review                     |
| Adoption Review                | Portal/mobile adoption insights, vendor participation rates, auction utilisation stats          |
| Technology Recommendations     | Review of emerging tools (e.g., AI Chatbot enhancements, new OCR models, personalisation tools) |
| Future Feature Planning        | Collaborative backlog grooming, feature prioritisation based on impact/value                    |
| Budget Forecasting             | Resource estimate for new roadmap items (separate proposal if needed)                           |
| Security & Compliance Advisory | Review of new PDPL/GDPR requirements, security scan results, risk alerts                        |

## Contract Terms:

| Item                   | Details  |
|------------------------|--|
| Duration               | 3 Months   |
| Invoicing Model        | 30+30+40   |
| Service Cap (Optional) | Includes up to XX man-days of support/development per year (e.g., 100–150 MDs)   |
| Overage                | Any additional days beyond cap billed at agreed daily rate                       |
| Support Channels       | Email, Ticketing System, Optional Dedicated Slack/WhatsApp                       |
| Team Composition       | Dedicated account manager, L2-L3 technical support, product consultant (on-call) |

## Benefits to Client:

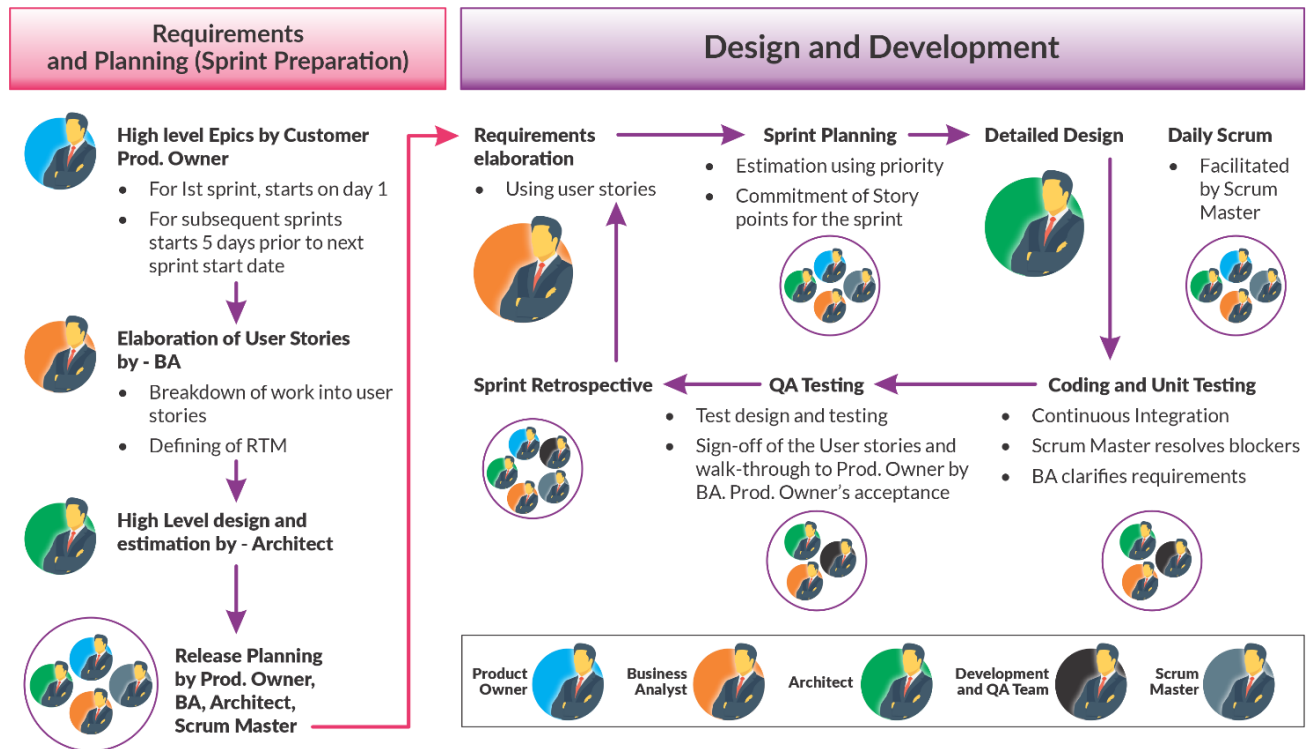

- Minimize downtime, avoid regression
- Focus on roadmap without technical debt
- Proactive compliance with evolving regulations
- Continuous alignment with business strategy
- Predictable cost model for support and growth

## Change Management Process:

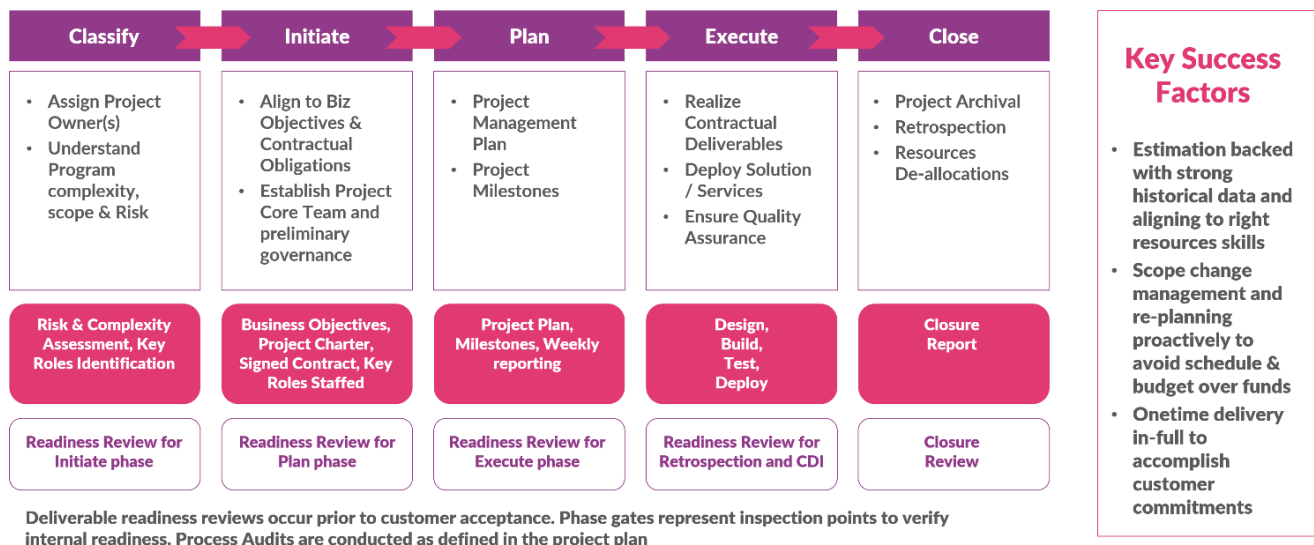

| Stage                              | Description   | Deliverables / Tools                                  | Responsibility                  |
|------------------------------------|---|---|---------------------------------|
| 1. Change Request Submission       | Any stakeholder (client/vendor) submits a change request detailing the proposed modification.   | Change Request Form (CRF) Change Request Log/Register | Request Initiator               |
| 2. Request Logging & ID Assignment | The request is recorded in a central log and assigned a unique ID for tracking and reference.   | Change Request Tracker                                | Project Manager                 |
| 3. Impact Assessment               | The vendor assesses the effect on scope, timeline, cost, quality, and risks.  | Impact Assessment Report                              | Vendor PM, Tech/QA Leads        |
| 4. Impact Review & Recommendation  | The vendor provides a recommendation on feasibility and implementation path.  | Impact Summary, Recommendation                        | Project Manager                 |
| 5. Approval Process                | Approval routing depends on impact severity: <ul style="list-style-type: none"> <li>• Minor: Joint PMs</li> <li>• Major: Client Steering Committee</li> </ul> | Approved CR document with signatures                  | Client + Vendor Decision Makers |
| 6. Communication of Change         | Approved changes are communicated to all impacted parties and teams.  | Email notifications, Project dashboard update         | Project Manager                 |
| 7. Implementation Planning         | The change is reflected in the updated project plan, resource allocation, or deliverable schedule.  | Revised Timeline, Updated SoW, Resource Plans         | Project Team Leads              |
| 8. Monitoring & Closure            | Status of the change is monitored until fully implemented; CR is then marked as "Closed".   | Change Register Update                                | Project Manager                 |

## Implementation Process

## Delivery Approach

## COMMERCIALS & TERMS

### Commercials:

|              | Amount in SAR          |
|--------------|------------------------|
| Phase 1      | 36,000.00 SAR          |
| Phase 2      | 36,000.00 SAR          |
| Phase 3      | 48,000.00 SAR          |
| <b>Total</b> | <b>1,20,000.00 SAR</b> |

### Payment Milestones-

| MileStones                               | Payment % |
|--|-----------|
| Initial Payment Before kick-off          | 30 %      |
| Website Deployment                       | 30 %      |
| ERP & Mobile App – Go live (Final Phase) | 40%       |

***THANK YOU!!***
